

Emilio Luna, Backend Developer

Buenos Aires, Argentina | lunaemilio2003@gmail.com

EDUCATION

National Technical University Technician, Software	Buenos Aires, Argentina August 2024 - Present
National Technical University Certificate, Docker & Kubernetes	Buenos Aires, Argentina April 2026 - June 2026
National Technical University Diploma, Python	Buenos Aires, Argentina September 2024 - May 2025

EXPERIENCE

Airport Security Police Backend Tech Lead	Buenos Aires, Argentina June 2025 - Present
- I make key decisions for the direction of the project, ensuring that it meets the company's vision. - I communicate with other teams and areas to optimize implementations and incident resolution. - I planned the software lifecycle for all projects assigned to my team, assigning different tasks based on difficulty to different people and being closely involved in the development. - I ensured the maintainability and scalability of the projects by designing the bases of the architectures, organizing the work scheme and prioritizing each feature. - I organize team priorities to keep the development flow aligned and ensure timely updates and product quality.	
Airport Security Police Computer Technician - Backend Developer	Buenos Aires, Argentina April 2022 - June 2025
- I implemented deployments with Docker and CI/CD, anticipating errors and accelerating development by up to 75%. - I design robust architectures, managing intercommunications with other company services. - Designed automated tests, improving error prevention and code quality by more than 30%. - I achieved clear and effective communication between technical and non-technical teams, saving time in meetings and encounters with other areas. - I maintain and update old projects, saving 40% money in labor and time when considering migrating or updating systems. - I resolved the incidents assigned to me and my team by communicating with other departments and whoever was actively involved in the problem. - I designed the Backend for different systems that handle more than 10,000 users per day.
